

ReSoURCE

Innovating Refractory Recycling

Funded by the Horizon Europe program, the 4-year “Refractory Sorting Using Revolutionizing Classification Equipment” (ReSoURCE) project aims to reduce Europe’s CO2 emissions significantly.

Using an AI-supported multi-sensor sorting equipment, comprising laser-induced breakdown spectroscopy, hyperspectral imaging, optimised pre-processing and automated ejection, the project will lay the foundation to set a new state-of-the-art for refractory sorting.
